

## INTEGRATED QUALITY MANAGEMENT SYSTEMS POLICY

In all our products, services and activities covering standards related to quality, environment, occupational health and safety, and energy management systems;

- To increase and maintain customer satisfaction by complying with applicable legal regulations, national and international standards and compliance obligations,
- To establish measurable targets regarding quality, environment, occupational health and safety, energy management systems, to regularly review their realization and to continuously improve our performance and management systems in this area, taking into account the best practices in the sector and the world,
- To determine and supply the necessary trained manpower, information, infrastructure and environment for the effective operation, control, continuity and continuous improvement of processes with risk-based thinking, and to use all resources at an optimum level within this scope,
- To comply with environmental legislation, administrative regulations and sectoral obligations, to ensure efficient use of natural resources, to protect the environment from a life cycle and sustainable development perspective, to take care to prevent pollution and to improve our recycling methods by reducing waste at its source, to encourage recycling and to continuously add positive value to the environment,
- To comply with occupational health and safety legislation and administrative regulations, to create a healthy and safe working environment, to take the necessary precautions and to make this sustainable by systematically identifying in advance all risks that may impair the health integrity of our employees and all related parties, with the participation of employees, believing that all kinds of occupational accidents and occupational diseases can be prevented, to eliminate hazards and reduce occupational health and safety risks, and to undertake to fulfill legal and other requirements.
- To maximize employee participation by receiving employees' opinions and suggestions on occupational health and safety issues and to share all kinds of information on health and safety issues with employees,
- To contribute to sustainable production by following technological developments and innovations, purchasing energy-efficient products and services, and using energy and materials efficiently,
- To ensure that our activities are consistent with the principles of sustainable development by keeping the impacts of our activities on the environment and human health under control,
- To educate and raise awareness of all our employees and stakeholders by following technological developments and innovations,
- It is our primary responsibility that all activities achieve business results that will create value for the relevant parties in line with the basic purpose and goals of the organization. Our policy will always be open and accessible to the society and all relevant parties.
- To regularly measure energy performance and energy efficiency and to carry out activities to increase and sustain energy efficiency, Our policy will always be open and accessible to the community and all interested parties.
